

# Orthodontic Photography – The essentials for taking high-quality clinical photographs

Presented by Dr Peter Sheridan

## About the Presenter

A senior Sydney dentist and a Fellow of the International College of Dentists, Peter is a Clinical Senior Lecturer at Sydney University and a world expert on Clinical Photography.

## Course Outline

- Rationale for use – the scope of Clinical Photography
- Using images to improve records, risk management, professional interaction and patient education
- Principles of exposure and settings
- Taking control of the camera to simplify and minimise adjustments
- Camera choices – body, lens and flash
- Where do the Intra-oral camera and the iPhone fit into Clinical Photography?
- In-camera post-processing... is it possible?
- Accessories – Retractors and mirrors
- The team – who takes the photos?
- Positioning and technique
- Improving patient compliance
- Data management
- Achieving quality, consistency and efficiency

## Objectives

**For all dental professionals, the practice of dentistry is becoming more complicated, regulated and competitive.**

Clinical Photography in dentistry is a discipline comparable to its sibling, digital radiography. With the right tools and technique, photographs (whether a face, an arch, a quadrant or a tooth) can be quickly taken and seamlessly integrated into every day general practice. The addition of photographic images to the pool of patient data can add enormously to every dentist's professionalism and satisfaction.

Clinical photography is now being taught at the undergraduate level at Sydney University, to dentists via the ADA CPD programmes and in many specialist programmes. Eventually it will be considered a fundamental and obligatory part of best practice, supporting and reinforcing treatment decisions and outcomes.

Good clinical photos are an evidential base on which patients are able to comprehend their problems and are empowered to make the right treatment decisions... See how this is an easy and ethical way to improve treatment compliance.
